### DETAILED ACTION

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by JP 2001-118,568.

JP '568 discloses SiO<sub>x</sub> product with x=1.24, 1.20, 1.18 and BET surface area = 86, 45, 23 (respectively) m<sup>2</sup>/g (note Examples 1-3, Table 1).

The product of JP '568 anticipates the claimed product.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2001-226,112.

Art Unit: 1754

JP '112 discloses  $\text{SiO}_x$  product wherein  $x = 0.9-1.8$  (note claim 2). This range overlaps the claimed range. The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, see *In re Malagari*, 182 U.S.P.Q. 549.

JP '112 further discloses that the  $\text{SiO}_x$  is formed by heating a mixture of  $\text{SiO}_2$  and metal Si powder to a range of  $1100-1600^\circ\text{C}$  to form SiO gas and the SiO gas is cooled and deposited on a substrate which is controlled at  $200-400^\circ\text{C}$  (note claim 5).

The difference is JP '112 does not specifically disclose the step of adding oxygen.

However, since the SiO formed in the heating step must be converted to  $\text{SiO}_x$ , and when  $x$  is greater than 1, additional oxygen is required to oxidize all the available Si to  $\text{SiO}_x$ . Thus, It would have been obvious to one of ordinary skill in the art at the time of the invention was made add the necessary amount of oxygen to the process of JP '112 in order to form the desired  $\text{SiO}_x$  from a gas containing SiO.
